

Math 1553 Worksheet §1.3

Solutions

If you don't have a computer, find someone who does.

1. Let $v_1 = \begin{pmatrix} 2 \\ 1 \\ 3 \end{pmatrix}$ $v_2 = \begin{pmatrix} -2 \\ -3 \\ -1 \end{pmatrix}$ $w = \begin{pmatrix} 2 \\ -4 \\ 8 \end{pmatrix}$.

Question: Is w in $\text{Span}\{v_1, v_2\}$?

- Formulate this question as a vector equation.
- Formulate this question as a system of linear equations.
- Formulate this question as an augmented matrix.
- Answer the question using the [interactive demo](#).
- Answer the question using row reduction.

Solution.

- a) Does the following vector equation have a solution?

$$x \begin{pmatrix} 2 \\ 1 \\ 3 \end{pmatrix} + y \begin{pmatrix} -2 \\ -3 \\ -1 \end{pmatrix} = \begin{pmatrix} 2 \\ -4 \\ 8 \end{pmatrix}$$

- b) Does the following linear system have a solution?

$$\begin{aligned} 2x - 2y &= 2 \\ x - 3y &= -4 \\ 3x - y &= 8 \end{aligned}$$

- c) As an augmented matrix:

$$\left(\begin{array}{cc|c} 2 & -2 & 2 \\ 1 & -3 & -4 \\ 3 & -1 & 8 \end{array} \right)$$

- e) Row reducing yields

$$\left(\begin{array}{cc|c} 1 & 0 & 7/2 \\ 0 & 1 & 5/2 \\ 0 & 0 & 0 \end{array} \right)$$

so $x = 7/2$ and $y = 5/2$.

2. Consider the system of linear equations

$$\begin{aligned}x + 2y &= 7 \\2x + y &= -2 \\-x - y &= 4\end{aligned}$$

Question: Does this system have a solution? If so, what is the solution set?

- Formulate this question as an augmented matrix.
- Formulate this question as a vector equation.
- What does this mean in terms of spans?
- Answer the question using the [interactive demo](#).
- Answer the question using row reduction.

Solution.

a) As an augmented matrix:

$$\left(\begin{array}{cc|c} 1 & 2 & 7 \\ 2 & 1 & -2 \\ -1 & -1 & 4 \end{array} \right)$$

b) What are the solutions to the following vector equation?

$$x \begin{pmatrix} 1 \\ 2 \\ -1 \end{pmatrix} + y \begin{pmatrix} 2 \\ 1 \\ -1 \end{pmatrix} = \begin{pmatrix} 7 \\ -2 \\ 4 \end{pmatrix}$$

c) There exists a solution if and only if $\begin{pmatrix} 7 \\ -2 \\ 4 \end{pmatrix}$ in the span of $\begin{pmatrix} 1 \\ 2 \\ -1 \end{pmatrix}$ and $\begin{pmatrix} 2 \\ 1 \\ -1 \end{pmatrix}$.

e) Row reducing yields

$$\left(\begin{array}{cc|c} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{array} \right),$$

so there are no solutions. (This should be obvious from the picture in (d)).

3. Consider the vector equation

$$x \begin{pmatrix} 2 \\ 1 \\ 3 \end{pmatrix} + y \begin{pmatrix} -2 \\ -1 \\ -1 \end{pmatrix} + z \begin{pmatrix} 3 \\ 0 \\ 4 \end{pmatrix} = \begin{pmatrix} -5 \\ -1 \\ -2 \end{pmatrix}.$$

Question: Is there a solution? If so, what is the solution set?

- Formulate this question as an augmented matrix.
- Formulate this question as a system of linear equations.
- What does this mean in terms of spans?
- Answer the question using the [interactive demo](#).
- Answer the question using row reduction.

Solution.

a) As an augmented matrix:

$$\left(\begin{array}{ccc|c} 2 & -2 & 3 & -5 \\ 1 & -1 & 0 & -1 \\ 3 & -1 & 4 & -2 \end{array} \right)$$

b) What is the solution set of the following linear system?

$$\begin{aligned} 2x - 2y + 3z &= -5 \\ x - y &= -1 \\ 3x - y + 4z &= -2 \end{aligned}$$

c) There exists a solution if and only if $\begin{pmatrix} -5 \\ -1 \\ -2 \end{pmatrix}$ is in $\text{Span} \left\{ \begin{pmatrix} 2 \\ 1 \\ 3 \end{pmatrix}, \begin{pmatrix} -2 \\ -1 \\ -1 \end{pmatrix}, \begin{pmatrix} 3 \\ 0 \\ 4 \end{pmatrix} \right\}$.

e) Row reducing yields

$$\left(\begin{array}{ccc|c} 1 & 0 & 0 & 3/2 \\ 0 & 1 & 0 & 5/2 \\ 0 & 0 & 1 & -1 \end{array} \right),$$

so $x = 3/2$, $y = 5/2$, and $z = -1$.

4. Consider the augmented matrix

$$\left(\begin{array}{ccc|c} 2 & -2 & 2 & 0 \\ 1 & -3 & -4 & -9 \\ 3 & -1 & 8 & 9 \end{array} \right)$$

Question: Does the corresponding linear system have a solution? If so, what is the solution set?

- Formulate this question as a vector equation.
- Formulate this question as a system of linear equations.
- What does this mean in terms of spans?
- Answer the question using the [interactive demo](#).
- Answer the question using row reduction.
- Find a **different** solution in parts (e) and (d).

Solution.

- a) What are the solutions to the following vector equation?

$$x \begin{pmatrix} 2 \\ 1 \\ 3 \end{pmatrix} + y \begin{pmatrix} -2 \\ -3 \\ -1 \end{pmatrix} + z \begin{pmatrix} 2 \\ -4 \\ 8 \end{pmatrix} = \begin{pmatrix} 0 \\ -9 \\ 9 \end{pmatrix}$$

- b) What is the solution set of the following linear system?

$$\begin{aligned} 2x - 2y + 2z &= 0 \\ x - 3y - 4z &= -9 \\ 3x - y + 8z &= 9 \end{aligned}$$

- c) There exists a solution if and only if $\begin{pmatrix} 0 \\ -9 \\ 9 \end{pmatrix}$ is in $\text{Span} \left\{ \begin{pmatrix} 2 \\ 1 \\ 3 \end{pmatrix}, \begin{pmatrix} -2 \\ -3 \\ -1 \end{pmatrix}, \begin{pmatrix} 2 \\ -4 \\ 8 \end{pmatrix} \right\}$.

- e) Row reducing yields

$$\left(\begin{array}{ccc|c} 1 & 0 & 7/2 & 9/2 \\ 0 & 1 & 5/2 & 9/2 \\ 0 & 0 & 0 & 0 \end{array} \right).$$

Hence z is a free variable, so the solution in parametric form is

$$\begin{aligned} x &= \frac{9}{2} - \frac{7}{2}z \\ y &= \frac{9}{2} - \frac{5}{2}z. \end{aligned}$$

Taking $z = 0$ yields the solution $x = y = 9/2$.

- f) Taking $z = 1$ yields the solution $x = 1, y = 2$.

5. Decide if each of the following statements is true or false. If it is true, prove it; if it is false, provide a counterexample.
- a) Every set of four or more vectors in \mathbf{R}^3 will span \mathbf{R}^3 .
 - b) The span of any set contains the zero vector.

Solution.

- a) This is **false**. For instance, the vectors

$$\left\{ \begin{pmatrix} 1 \\ 0 \\ 0 \end{pmatrix}, \begin{pmatrix} 2 \\ 0 \\ 0 \end{pmatrix}, \begin{pmatrix} 3 \\ 0 \\ 0 \end{pmatrix}, \begin{pmatrix} 4 \\ 0 \\ 0 \end{pmatrix} \right\}$$

only span the x -axis.

- b) This is **true**. We have

$$0 = 0 \cdot v_1 + 0 \cdot v_2 + \cdots + 0 \cdot v_p.$$

Aside: the span of the empty set is equal to $\{0\}$, because 0 is the empty sum, i.e. the sum with no summands. Indeed, if you add the empty sum to a vector v , you get $v +$ (no other summands), which is just v ; and the only vector which gives you v when you add it to v , is 0. (If you find this argument intriguing, you might want to consider taking abstract math courses later on.)
